

Workshop on “Tree stability: models standardisation and integration”

PERSPECTIVES

It was first decided to continue organizing regular workshops (1 per year) on the topic of wind hazards in forest. The next one will be devoted to tree acclimation and adaptation to wind and will take place in UMR PIAF, Clermont-Ferrand (France).

The group also proposed to make an European COST action that could help in animating the network and encouraging collaboration projects.

Last, we building the foundations for the development of a software platform dedicated to the simulation of wind risks in forest. This project should be further discussed within the group.
